Governor Ricardo Rosello has mentioned the possibility of evaluating "non requested proposals" repeated times in press conferences about the power restoration in Puerto Rico. How if they give a chance at least to listen to this company. They have been posted in comments here in David page, about this subject. This sounds pretty interesting: Karie Elsasser "We have much better technology that can do 2 things at once and that's eat the debris and garbage and turn it into power... PR also has Major issues with Agermax which is the by product of their Coal to Power Plant... we can also put Gasifiers at the sites where they have dumped that product and we can in a clean way get rid of the Agermax and turn it into Power.. We also have Solar, Wind and can turn any liquid into Power and Hospital Grade Water... on top of that we have technologies to rebuild homes and businesses so they are Hurricane Resistant.. all of this could also bring much needed Sustainable Permanent Economic Development and we can fund it through our Humanitarian Funding Program so the Government does not incur anymore further debt.. We can also help restructure their current debt... All we need is for the Governor to call us and we will get to work, our teams are ready to go and already sending massive aid for the initial relief.. We now want to come in and help permanently.. We can make PR almost completely independent and in a way that is Permanent and Sustainable... we are here to help not hurt which sadly is the biggest issue with these devastating circumstances".. www.nativefuel.org
