Reference: Proposed Regulation Demand Response Case number: NEPR-MI-2019-0015

Public Comments from Windmar Group:

Windmar Group has two comments:

Article 1 Section 1.09 item b)14): “Energy Storage”. Puerto Rico has tremendous possibility for micro and mini pump storage systems. Systems that can provide in excess of 100kW of constant energy for hours every day. They receive energy to pump water in addition to water that might fill the upper reservoirs by free flow. The current definition is for battery storage and other storage systems seem to be ignored.

Article 3 Section 3.02 item C)2)b): The listing of interested stakeholders doesn't include renewable energy for-profit corporations, such as the Windmar Group in the list of “diverse perspectives”. One could argue that we will be allowed because the participation is “not limited to” the listed, but not listing for-profit corporations who have been at the forefront of pushing PREPA to provide renewable energy sends a message that we are not automatically welcome and have to petition to be heard. Please consider listing for-profit renewable energy corporations in the list of stakeholders.

Sincerely,

Victor Gonzalez
