IN RE: MANEJO DEL MANTENIMIENTO Y REPARACIONES DE LAS UNIDADES DE GENERACIÓN UTILIZADAS POR LA AUTORIDAD DE ENERGÍA ELÉCTRICA DE PUERTO RICO PARA SUPLIR SERVICIO ELÉCTRICO	**CASE NO.:** NEPR-MI-2021-0014 **SUBJECT:** Motion to Submit Genera PR LLC's Recommendation Letter in Compliance with the June 16 Order.

MOTION TO SUBMIT GENERA PR LLC'S RECOMMENDATION LETTER IN COMPLIANCE WITH THE JUNE 16 2023 ORDER

TO THE HONORABLE PUERTO RICO ENERGY BUREAU:

COMES NOW GENERA PR, LLC ("Genera PR"), through its counsel of record, and respectfully state and request the following:

1. Acting in accordance with the authoritative mandate entrusted to the Energy Bureau of the Puerto Rico Service Regulatory Board ("Energy Bureau") by statutory provisions, to diligently serve the best interests of the people of Puerto Rico and to carefully oversee the operational efficiency of the electric power system, this Motion is respectfully submitted to enforce strict compliance with a crucial order issued under the docket.

2. In a pursuit to fulfill their oversight function, the Energy Bureau established this docket, primarily aimed at compiling required information regarding the maintenance and repair of the generation fleet of the Puerto Rico Electric Power Authority (hereinafter referred to as "PREPA"), in addition to other pertinent reports.

3. On January 24, 2023, PREPA, in conjunction with the Puerto Rico Public-Private Partnership Authority (hereinafter referred to as "P3A""), and Genera PR, entered into the Puerto Rico Thermal Generation Facilities Operation and Maintenance Agreement (hereinafter referred

to as the "OMA"). The OMA, crafted to fortify the commonwealth's energy resources, outlines an elaborate plan for operation and maintenance services ("O&M Services") pertinent to certain baseload generation plants and combustion turbine peaking units, collectively designated as "Legacy Generation."

4. Section 4.2(j) of the OMA mandates Genera PR to rigorously assess and submit reports on the inventory of Consumables, Spare Parts, and Capital Spare Parts for each Legacy Generation Asset. This section requires a concerted and strategic collaboration between Genera PR, original equipment manufacturers, P3A, and PREPA to determine the necessary inventory that will enable Genera PR to uphold its contractual obligations.

5. In fulfillment of Section 4.2(j) of the Genera OMA, Genera PR submitted a letter on June 1, 2023, articulating its recommendations regarding Consumables, Spare Parts, and Capital Spare Parts (hereinafter referred to as the "Recommendation Letter") via email to both the Energy Bureau and the P3A.

6. Subsequently, on June 16, 2023, the Energy Bureau issued an order directing Genera PR to file its Recommendation Letter in this docket within forty-eight (48) hours of the issuance of the Resolution and Order (the "June 16 Order"). The order also stipulates that any future recommendations under Section 4.2(j) must be submitted in accordance with the timelines specified in Section 4.2(j) of the OMA.

7. In light of the above, Genera PR herein submits the Recommendation Letter as Exhibit A of this Motion.

WHEREFORE, Genera PR respectfully requests that this Honorable Energy Bureau **take notice** of the above and **acknowledge** the receipt of the Recommendation Letter as timely and in compliance with the June 16 Order.

RESPECTFULLY SUBMITTED.

In San Juan, Puerto Rico, this 18th day of June 2023.

Re: Recommendation of Consumables, Spare Parts and Capital Spare Parts Submission; Operation and Maintenance Agreement ("OMA") dated as of January 24, 2023, by and among the Puerto Rico Electric Power Authority ("Owner" or "PREPA"), the Puerto Rico Public-Private Partnerships Authority ("Administrator" or "P3A") and Genera PR LLC ("Operator" or "Genera"). Capitalized terms not defined in this letter shall have the meanings ascribed to them in the OMA.

Dear Administrator/PREB:

As required by Section 4.2(j) of the OMA, Genera is to review the inventory of Consumables, Spare Parts and Capital Spare Parts for each Legacy Generation Asset and submit to Administrator and PREB (with a copy to Owner), for their review and approval, a recommendation in consultation with the original equipment manufacturers of any additional Consumables, Spare Parts and Capital Spare Parts to allow Operator to comply with its obligations under the OMA for twelve (12) months following the Service Commencement Date.

Genera, with the assistance of Sargent & Lundy, OEMs, and other advisors, has completed a review of the inventory of Consumables, Spare Parts, and Capital Spare Parts for each Legacy Generation Asset. The list, enclosed as Attachment A, shows the Consumables, Spare Parts, and Capital Spare Parts necessary to provide Genera with a supply to comply with its obligations under the OMA for the initial 12-month period after the Service Commencement Date, having coordinated with P3A and PREPA.

Genera requests comments on the proposed list from Administrator/PREB. Should P3A/PREB have any questions regarding the attached list, please reach out to John Prado at jpardo@genera-services.com.

Genera looks forward to working with you for a productive Mobilization Period through transparent, open, and consistent communications.

OVERVIEW OF GENERA PR SPARE PARTS LISTING

BACKGROUND

Genera PR conducted a conditional assessment of the Legacy Generation assets at the ten (10) facilities and the availability and serviceability of the existing spare parts stored at the four (4) warehouses.

The results of assessment indicated low availability and poor infrastructure of the Power Generation equipment and warehousing buildings across the Generation facilities and consistently improper storage and poor serviceability of a large portion of the spare parts.

Subsequently, in order to meet the applicable laws and regulations, Prudent Utility Practice and other requirements as defined in the OMA to properly operate and maintain the Generating Power facilities, Genera PR developed a recommended spare parts listing for each major piece of equipment of the Legacy Generating Assets within the following categories:

1. **Critical Spare parts** – High risk that each Legacy Generation Asset should have on site
    - Critical Plants – Base Load Plants
    - Critical Equipment
        - Impact on Generation
        - Impact on EHS
        - Impact on Emergency response
        - Impact on Performance
    - Spares parts – Costs, Lead-times, Condition
    - Identification of Spares – Stock #'s

2. **Major Outage Spare Parts** (Major maintenance – capital parts for major equipment – turbines/generators/condensers/others)
    - Major Outage plans for baseload Plants (1 - 2 year) - Main Equipment, Balance of Plant
    - Spare parts required for Outage
        - Spares on hand
        - Spares on order
        - Spares in transit
        - RFP's
        - Spares – to be reconditioned/repairs
    - Costs & Lead-times, Condition
    - Identification of Spares – Stock #'s

3. **Minor/Routine and Preventative maintenance Spares Parts** for major equipment and balance of plant
    - Number of SKU's – items
    - Identification of Spares – Stock #'s
    - Costs & Lead-times, Condition
    - Identify Consumables

METHODOLOGY

Over a 3-week period, teams comprising of Sargent & Lundy, NFE and Genera personnel visited all PREPA facilities (Plants & Warehouses) to collect information for compiling the Spare Parts listing as follows:

- Gather spare parts information from the OEM and suppliers, PREPA's plant and procurement personnel and digitized information from the LUMA vault site, O&M Manuals, and equipment nameplate information.

- Conduct interviews with plant personnel to get feedback on equipment maintenance history and modifications or upgrades of equipment.

- Categorize and assign equipment and spares as per the agreed categories

- Obtain PRPEA's existing inventory listing (quantities, stock numbers, costs, lead times, etc.) for all categories including LTSA, Consumables.

- Conduct a comparison of the Genera's recommended spare parts list against PREPA's current inventory – gap analysis

- Perform a visual inspection of the warehouse inventory especially for critical equipment to determine their serviceability

- Spare parts coverage was based on the equipment – mission critical, intermediate, peakers, units offline.

Assumptions:

1. Recommended spare parts for the units below were not requested because they are either scheduled to be decommissioned soon or they have been in a forced outage for an extended period:
    - Palo Seco ST 1 and 2
    - Costa Sur ST 1, 2, 3 and 4
2. Spare parts lists for new Temporary Power / Emergency Generation Units were not considered
3. The spare parts listing for the GE Frame 5's was for six (6) units - 50% of the existing fleet
4. The Spare part listing will be further adjusted after conducting physical inspection of the equipment based on condition, expected operating life, spares serviceability, etc.

EXECUTION PLAN - STRATEGIES

Given the magnitude of issues identified in the assessment, Genera PR will be implementing immediately after service commencement date (July 1st, 2023) the following:

1. Conduct a comprehensive utility wide, risk-based inspection program to measure the health of all the assets. The assessment will be focused on the Mission critical Generating units that have limitation in their performance and availability primarily due to the lack of spare parts.
2. Conduct a Warehouse assessment of the condition of the spare parts in inventory - Validate the serviceability of the existing Spares Parts on hand – fit to use, specs, obsolescence, etc.
3. Improve the storage, handling, and distribution of the spares – Inventory management and controls. - Genera PR recognizes the importance of spare parts accessibility and management in supporting reliable, effective, and efficient plant operations. The Genera PR spare parts management will include determination of requirements, procurement, storage, cost accounting, inventory control, refurbishment, or replacement.
4. Rationalize the existing contracts for the supply of spares – plant, purchasing, suppliers
5. Procure the "best quality part fit" based on the plant "current operating scenario."
6. Obtain the "best part price" through a competitive bid process.
7. Conduct a risk analysis of all equipment to determine which spare parts that should be kept on hand in order to reduce downtime associated with unplanned equipment outages – prepare a gap analysis of requires spares vs. actual on hand (lead time, costs etc.)
8. Identify the areas of high volumes of parts usage, chronic or repeated failures and mean time between failures on equipment – spare parts optimization program

9. An evaluation for retrofit or replacement of critical equipment that has extensive corrective maintenance history will be done.
10. Review the historical spares usage and inventory management and controls – develop a robust WMS
11. Develop a robust CMMS to support and automate the planning, maintenance, and inventory processes
12. Develop a comprehensive supply chain system - spares purchases will be driven by an evaluation of criticality, availability, lead time, and cost.
