EXHIBIT 2

Since SEPR's solar system does not feature energy storage, it only provides energy from approximately 6 a.m. to 6 p.m., depending on the season, weather, and irradiation. However, SEPR's monitoring services operate 24 hours a day, 365 days a year, to ensure continuous and reliable service. This level of operation reflects our commitment to excellence and our ability to meet our customers' demands at any time. Thanks to a robust infrastructure and a highly trained team, SEPR can maintain high standards of efficiency and availability, always ensuring system stability and performance.
