GOVERNMENT OF PUERTO RICO
PUBLIC SERVICE REGULATORY BOARD
PUERTO RICO ENERGY BUREAU

IN RE: MANEJO DEL MANTENIMIENTO Y REPARACIONES DE LAS UNIDADES DE GENERACIÓN UTILIZADAS POR LA AUTORIDAD DE ENERGÍA ELÉCTRICA DE PUERTO RICO PARA SUPLIR SERVICIO ELÉCTRICO	**CASE NO.:** NEPR-MI-2021-0014 **SUBJECT:** Memorandum of Law in Support of Request for Confidential Treatment of Exhibits 4, 5, and 6 to the Motion to Submit Supplemental Report to the Q4 Quarterly Report Filed on October 8, 2026

MEMORANDUM OF LAW IN SUPPORT OF REQUEST FOR CONFIDENTIAL TREATMENT OF EXHIBITS 4, 5, AND 6

TO THE HONORABLE PUERTO RICO ENERGY BUREAU:

COMES NOW GENERA PR LLC ("Genera"), as agent of the Puerto Rico Electric Power Authority ("PREPA"),[1] through its counsel of record, and respectfully submits and prays as follows:

I. INTRODUCTION

1. On October 8, 2026, Genera filed a *Motion to Submit Supplemental Report to the Q4 Quarterly Report on Consumables, Spare Parts, and Capital Spare Parts for Fiscal Year 2026 in Compliance with the Resolution and Order Dated September 18, 2026, Request for Extension of Time, and Request for Confidential Treatment* ("October 8 Motion"). Through the October 8 Motion, Genera submitted, as Exhibit A, the *Supplemental Report to the Q4 Quarterly Report on Consumables, Spare Parts, and Capital Spare Parts for Fiscal Year 2026* ("Supplemental Q4 Report"), which responds to Requirements 3, 5, 6, 7, and 8 of the Resolution and Order issued by

[1]Pursuant to the *Puerto Rico Thermal Generation Facilities Operation and Maintenance Agreement* ("LGA OMA"), dated January 24, 2023, executed by and among PREPA, the Puerto Rico Public-Private Partnerships Authority and Genera, Genera is the sole operator and administrator of the Legacy Generation Assets (as defined in the LGA OMA) and the sole entity authorized to represent PREPA before the Energy Bureau with respect to any matter related to the performance of any of the O&M Services (as defined in the LGA OMA) provided by Genera under the LGA OMA.

the Puerto Rico Energy Bureau ("Energy Bureau") on September 18, 2026 ("September 18 Order"), together with Exhibits 1 through 6 referenced therein.

2. Genera filed three of those exhibits under seal. Exhibit 4 contains the root cause analysis documents referenced in the revised Attachment 5 (Exhibit 3), submitted in response to Requirement 5. Exhibit 5 contains the notes of the weekly coordination meetings between LUMA Energy, as System Operator, and Genera held from April 2 through May 28, 2026, issued by LUMA System Operations, submitted in response to Requirement 7.[2] Exhibit 6 contains the Fiscal Year 2026 maintenance program and condition monitoring records for each plant, submitted in response to Requirement 8.

3. In paragraph 11 of the October 8 Motion, Genera requested that Exhibits 4, 5, and 6 be kept confidential and under seal, and informed that it would file a memorandum of law in support of that request within ten (10) days, pursuant to the Energy Bureau's Policy on Management of Confidential Information, CEPR-MI-2016-0009, as amended (the "Policy on Confidential Information"). Accordingly, Genera respectfully submits the instant Memorandum of Law.

4. Genera's request is narrowly tailored. Genera does not seek confidential treatment of the October 8 Motion, of the Supplemental Q4 Report, or of Exhibits 1, 2, and 3, all of which remain public. Those documents disclose, among other things, the fleet and unit level performance indicators for Fiscal Year 2026; the unit, cause, dates, duration, and corrective action for each forced outage event in the fourth quarter; the versions of the Unit Maintenance Plan; and a description of the records contained in Exhibit 6. The request is limited to the underlying

[2]The first page of the document filed as Exhibit 5 bears the internal caption "Exhibit 4." That caption does not correspond to the exhibit numbering of the October 8 Motion. The document is the one identified in the October 8 Motion and in the response to Requirement 7 of the Supplemental Q4 Report as Exhibit 5, and it consists of twenty seven (27) pages.

engineering, operational, and condition records whose public disclosure would expose specific vulnerabilities of the Legacy Generation Assets and of the electric system and would reveal proprietary and commercially sensitive information of third parties. The Energy Bureau and its personnel retain full access to all three exhibits in the exercise of their regulatory functions, and Genera files herewith redacted public versions of each exhibit.

II. IDENTIFICATION OF CONFIDENTIAL INFORMATION

In accordance with Section A(3) of the Policy on Confidential Information, Genera identifies the confidential information as follows:

Document Name	Pages	Date Filed	Summary of Legal Basis for Confidential Designation	Summary of Why Each Claim Conforms to the Applicable Legal Basis
Exhibit 4: Root Cause Analysis documents referenced in Exhibit 3. Aguirre Power Complex (Aguirre Combined Cycle and Aguirre Unit 2).	Pages 1 through 84	October 8, 2026	Critical Energy Infrastructure Information (CEII) under Section D(2) of the Policy on Confidential Information and 18 C.F.R. § 388.113(c)(2); critical infrastructure information under 6 U.S.C. §§ 671(3) and 673(a)(1)(E); Act 40-2024; Article 1.10(i)(ix) of Act 17-2019; Confidential Information under Sections 1.1 and 13.2 of the LGA OMA; Section 6.15 of Act 57-2014; Section 1.15 of Regulation 8543.	Root cause analyses of forced outages at the Aguirre Combined Cycle units and Aguirre Unit 2. They describe the specific failure modes of gas turbine control and protection functions, generator output and excitation equipment, station DC and uninterruptible power systems, and the plant's interface with the 230 kV switchyard, including interdependencies between units. They contain protective relay indications, trip logic, control system data, test results, and pending corrective actions. This is specific engineering and vulnerability information about critical generation infrastructure that could be useful to a person planning to disable it.
Exhibit 4 (cont.). Cambalache Power Plant.	Pages 85 through 89	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84.	Root cause analysis of the unavailability of the combustion turbines' fire protection system and a preliminary forced outage report. They contain control system trip and alarm identifiers, protection and load shedding logic, the units' response to a system frequency disturbance, and the condition of a safety system. This information reveals how the units' protection and safety systems operate and fail.

Document Name	Pages	Date Filed	Summary of Legal Basis for Confidential Designation	Summary of Why Each Claim Conforms to the Applicable Legal Basis
Exhibit 4 (cont.). Costa Sur Power Plant.	Pages 90 through 112	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84.	Root cause analyses of boiler pressure part failures, generator field ground, turbine control and protection system trips, turbine valve condition, and boiler fuel supply trips at Costa Sur Units 5 and 6. They describe recurring failure mechanisms, internal equipment condition, the logic and hardware of the turbine protection systems, and the corrective actions taken or pending, for two of the largest baseload units on the system.
Exhibit 4 (cont.). Mayagüez Power Plant, engineering report prepared by the original equipment manufacturer.	Pages 113 through 117	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84. In addition: Trade secret of a third party under Act 80-2011 and Rule 513 of the Rules of Evidence; Article 1.10(i)(vii) of Act 17-2019; Article 4 of Act 122-2019.	Engineering summary and event analysis prepared by the original equipment manufacturer of the Mayagüez gas generators and delivered to Genera as its customer. It contains equipment serial and service case identifiers, the manufacturer's diagnostic methodology, transient data analysis, component inspection and calibration values, acceptance criteria, and fuel system configuration details. It is the manufacturer's proprietary work product, which is not publicly available and has value to competing service providers, and it also constitutes detailed design and vulnerability information.
Exhibit 4 (cont.). Mayagüez Power Plant, root cause analyses.	Pages 118 through 138	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84.	Root cause analyses of forced outages of the Mayagüez combustion turbine units. They describe failure modes, protection actuations, control system behavior, and corrective actions for specific units, which are relevant to the reliability of the western region of the system.
Exhibit 4 (cont.). Palo Seco Power Plant.	Pages 139 through 147	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84.	Root cause analysis of a Unit 3 trip, including the behavior of the unit's instrumentation and control logic under loss of signal conditions, control system trend data, and the condition of field wiring. This describes precisely how a signal disturbance can cause a unit trip.
Exhibit 4 (cont.). San Juan Power Plant.	Pages 148 through 172	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84.	Root cause analyses of trips of San Juan Units 5 and 9, involving fire protection system activation, combustion turbine temperature control, and the loss of a unit auxiliary bus. They contain operating and trip

Document Name	Pages	Date Filed	Summary of Legal Basis for Confidential Designation	Summary of Why Each Claim Conforms to the Applicable Legal Basis
				set points, control valve logic, protection coordination findings, electrical test results, and photographs of protective relay indications.
Exhibit 5: LUMA-Genera Coordination Meeting Notes, April 2 through May 28, 2026, issued by LUMA System Operations.	Pages 1 through 27	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84. In addition: commercially sensitive information of third parties under Article 1.10(i)(vii) of Act 17-2019 and Article 4 of Act 122-2019.	Weekly operational records of the System Operator covering nine coordination meetings. They contain the unit by unit availability, limitations, technical causes, and estimated return dates for the entire Genera fleet; fuel inventory status, delivery volumes and dates by plant, and LNG vessel schedules of third party fuel suppliers; conditions under which outages were coordinated based on the availability of other units; the status of protective and switching equipment; schedules for testing system restoration capabilities; and the names and roles of operating personnel. Together, they depict where and when the system was most constrained.
Exhibit 6: Maintenance Program and Condition Monitoring records for Fiscal Year 2026, submitted as an electronic folder.	Entire exhibit (all files and subfolders)	October 8, 2026	Same legal bases identified for Exhibit 4, pages 1 through 84. In addition, for the oil analysis reports: Trade secret of a third party under Act 80-2011 and Rule 513 of the Rules of Evidence; Article 1.10(i)(vii) of Act 17-2019; Article 4 of Act 122-2019.	Thousands of work order entries exported from Genera's computerized maintenance management system for each facility, monthly preventive maintenance reports, corrective maintenance reports by plant, and condition assessment reports for vibration, infrared thermography, and lubricating oil analysis. The records identify, equipment by equipment, the condition, priority, and status of work on safety and protection systems, emergency and system restoration equipment, DC power systems, transformers, and fuel storage and handling facilities, including deficiencies that remained open for extended periods. Together, they constitute an assessment of the condition and vulnerability of each Legacy Generation Asset and reflect plant configuration through equipment identifiers. The oil analysis reports were prepared by an outside laboratory using its own proprietary methodology and classification criteria.

III. APPLICABLE LAW

The governing statute for the management of confidential information submitted to the Energy Bureau is Section 6.15 of Act No. 57-2014, known as the "Puerto Rico Energy Transformation and RELIEF Act." This section provides that "[i]f any person who is required to submit information to the Energy [Bureau] believes that the information to be submitted carries a confidentiality privilege, such person may request the [Bureau] to treat such information as confidential." 22 LPRA § 1054n. If, after conducting a meticulous evaluation, the Energy Bureau determines that the information warrants protection, it must "grant such protection in a manner that least affects the public interest, transparency, and the rights of the parties involved in the administrative procedure in which the allegedly confidential document is submitted." *Id.* at Section 6.15(a).

Information so protected must be withheld from the public domain, "must be duly safeguarded and provided exclusively to the personnel of the Energy [Bureau] who need to know such information under nondisclosure agreements," *id.* at Section 6.15(c), and access to it shall be provided "only to the lawyers and external consultants involved in the administrative process after the execution of a confidentiality agreement." *Id.* at Section 6.15(b). The Energy Bureau "must swiftly act on any privilege and confidentiality claim made by a person under its jurisdiction through a resolution for such purposes before any potentially confidential information is disclosed." *Id.* at Section 6.15(d).

The Policy on Confidential Information, issued pursuant to this statutory framework, details the procedure a party must follow to request confidential treatment of a document or a portion thereof. It requires the producing party to identify the confidential information and to file, within ten (10) days, a memorandum of law that relates each document to a legal basis and to

specific arguments supporting each claim, including a table identifying the confidential information, the legal basis for each designation, and the reasons why each designation conforms to that legal basis. *See* Section A of the Policy on Confidential Information, as amended by the Resolution of September 20, 2016. The Policy recognizes Critical Energy Infrastructure Information ("CEII") as a category of information warranting protection, and provides that information validated as CEII may be accessed by the parties' authorized representatives only after executing a nondisclosure agreement, and only at the offices of the Energy Bureau or of the producing party, without copying the information or bringing recording devices. *Id.* at Section D(2). Information validated as a trade secret under Act 80-2011 may be accessed only by the producing party and the Energy Bureau, unless otherwise ordered. *Id.* at Section D(1). The Policy further requires the producing party to file, simultaneously, a redacted or public version and an unredacted or confidential version of any document containing Confidential Information, and to notify the public version to all parties. *Id.* at Section A.

Relatedly, Section 1.15 of Energy Bureau Regulation No. 8543, *Regulation on Adjudicative, Notice of Noncompliance, Rate Review, and Investigation Proceedings*, provides that when "a person ha[s] the duty to disclose information to the [Bureau] considered to be privileged pursuant to the Rules of Evidence, said person shall identify the allegedly privileged information, request the [Energy Bureau] the protection of said information, and provide supportive arguments, in writing, for a claim of information of privileged nature. The [Bureau] shall evaluate the petition and, if it understands [that] the material merits protection proceed accordingly to . . . Article 6.15 of Act No. 57-2014, as amended." *See also* Energy Bureau Regulation No. 9137 on Performance Incentive Mechanisms, Section 1.13.

Under federal regulations, CEII is "specific engineering, vulnerability, or detailed design information about proposed or existing critical infrastructure" that (i) relates details about the production, generation, transportation, transmission, or distribution of energy; (ii) could be useful to a person in planning an attack on critical infrastructure; (iii) is exempt from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. § 552; and (iv) does not simply give the general location of the critical infrastructure. 18 C.F.R. § 388.113(c)(2). Critical infrastructure, in turn, means "existing and proposed systems and assets, whether physical or virtual, the incapacity or destruction of which would negatively affect security, economic security, public health or safety, or any combination of those matters." *Id.* § 388.113(c)(4).

Federal law reflects the same policy more broadly. The Critical Infrastructure Information Act of 2002, 6 U.S.C. §§ 671 through 674, defines critical infrastructure information as information not customarily in the public domain and related to the security of critical infrastructure, including information regarding "the ability of any critical infrastructure . . . to resist such interference, compromise, or incapacitation, including any planned or past assessment, projection, or estimate of the vulnerability of critical infrastructure," and "any planned or past operational problem or solution regarding critical infrastructure . . . including repair, recovery, reconstruction, insurance, or continuity." 6 U.S.C. § 671(3)(B) and (C). Although the protections of that statute attach to information voluntarily submitted to the covered federal agency, the statute evidences a clear federal policy that information of this nature, when provided to a state or local government, shall not be made available pursuant to any state or local law requiring disclosure of information or records. *See* 6 U.S.C. § 673(a)(1)(E).

At the local level, Act No. 40-2024, the Cybersecurity Act of the Commonwealth of Puerto Rico, as amended, defines critical infrastructure as those services, systems, resources, and essential

assets, whether physical or virtual, the incapacity or destruction of which would have a debilitating impact on Puerto Rico's cybersecurity, health, economy, or any combination thereof. 3 LPRA § 10124(p). Its provisions apply not only to government entities, but also to natural or juridical persons doing business or having contracts with the government, including private persons performing public services and duties, with respect to those services and duties. 3 LPRA § 10122.

In connection with the duties of electric power service companies, Article 1.10(i) of Act No. 17-2019, known as the Puerto Rico Energy Public Policy Act, provides that such companies shall provide documents and information requested by customers, except for, among others, (i) information privileged under the Rules of Evidence of Puerto Rico; (vii) trade secrets of third parties; (viii) matters that must be kept confidential under a confidentiality agreement, provided the agreement is not contrary to the public interest; and (ix) public security matters relating to threats against the company, its property, or its employees. 22 LPRA § 1141i.

The Industrial and Trade Secret Protection Act of Puerto Rico, Act No. 80-2011, 10 LPRA §§ 4131 through 4144, deems a trade secret to be any information "(a) [t]hat has a present or a potential independent financial value or that provides a business advantage, insofar as such information is not common knowledge or readily accessible through proper means by persons who could make a monetary profit from the use or disclosure of such information, and; (b) for which reasonable security measures have been taken, as circumstances dictate, to maintain its confidentiality." 10 LPRA § 4132.[3] The Puerto Rico Supreme Court has explained that the trade secret privilege protects free enterprise and extends to commercial information that is confidential in nature. *Ponce Adv. Med. v. Santiago González*, 197 DPR 891, 901 to 902 (2017); *see also Next*

[3]Rule 513 of the Rules of Evidence of Puerto Rico provides that the owner of a trade secret may invoke the privilege to refuse and to prevent another person from revealing trade secrets, provided that these actions do not tend to conceal fraudulent activities or lead to an injustice. 32 LPRA Ap. VI, R. 513. If disclosure of a trade secret is ordered, precautionary measures should be adopted to protect the interests of the owner. *Id.*

Step Medical Co. v. MCS Advantage, Inc., KLCE201601116, 2016 WL 6520173 (holding that what constitutes a trade secret is evaluated applying a broad definition). Article 4 of Puerto Rico's Open Data Law, Act No. 122-2019, likewise exempts from public disclosure, among others, commercial or financial information whose disclosure would cause competitive harm, and trade secrets protected by contract, statute, or judicial decision. 3 LPRA § 9894.

Finally, the contractual framework governing Genera's operations independently supports confidential treatment. Section 1.1 of the LGA OMA defines "Confidential Information" as data or information disclosed by one party to the other "if and for so long as the data and information are protectable as trade secrets by the disclosing Party or are otherwise confidential," and lists as examples, among others, "the results of product testing, research data, . . . technical designs and specifications, . . . vendor lists, internal cost data, [and] the terms of contracts with employees and third parties." LGA OMA, Sec. 1.1. Section 13.2 of the LGA OMA establishes the parties' confidentiality obligations with respect to such information. *Id.* Sec. 13.2.

IV. REQUEST FOR CONFIDENTIALITY AND SUPPORTING ARGUMENTS

Confidential treatment of Exhibits 4, 5, and 6 is warranted because (a) each of them contains CEII and critical infrastructure information; (b) portions of them contain proprietary and commercially sensitive information of third parties; and (c) they constitute Confidential Information under the LGA OMA. Moreover, (d) the requested protection is the means that least affects the public interest and transparency, because the information that the public needs to understand Genera's compliance with the September 18 Order is already in the public record.

A. Exhibits 4, 5, and 6 Contain Critical Energy Infrastructure Information

The Legacy Generation Assets are critical infrastructure within the meaning of 18 C.F.R. § 388.113(c)(4), 6 U.S.C. § 671, and Act 40-2024. They provide most of the dispatchable

generation of an isolated electric system that has no interconnection with any other grid. The incapacity of any of the principal units, let alone of several of them at once, translates directly into generation shortfalls and load shedding, with immediate consequences for the economic security and the public health and safety of Puerto Rico. Each of the three exhibits contains specific engineering, operational, or vulnerability information about these assets that goes far beyond their general location.

1. Exhibit 4: Root Cause Analyses

Exhibit 4 is a compilation of more than thirty root cause analysis documents, totaling 172 pages, covering forced outages at the Aguirre, Cambalache, Costa Sur, Mayagüez, Palo Seco, and San Juan power plants. Each analysis reconstructs the sequence of events of a specific failure, identifies the failure mode and the contributing conditions, verifies the suspected causes through a structured methodology, and sets forth the corrective and preventive actions taken or still pending. To do so, the analyses describe, with technical precision, which protective functions actuated and why; the trip logic and set points of turbine, generator, and boiler protection systems; the behavior of control systems under abnormal signal conditions; the condition and configuration of auxiliary, DC, fire protection, and instrumentation systems; the interdependencies between units and between the plants and the transmission switchyard; and the deficiencies that remained open at the time of the analysis. Many of them include control system alarm and trip identifiers, electrical test results, control screen trend data, and photographs of protective relay indications.

This is the paradigm of "specific engineering, vulnerability, or detailed design information" under 18 C.F.R. § 388.113(c)(2). A root cause analysis is, by design, a document that explains how a generating unit can be made to fail. In the hands of a person planning to disable a generating facility, Exhibit 4 would identify which signals and conditions cause a unit to trip, which protective

schemes can propagate a single event to other units or to the switchyard, which auxiliary and safety systems constitute single points of failure, and which vulnerabilities remained uncorrected. The analyses also fall squarely within the categories of "past assessment . . . of the vulnerability of critical infrastructure" and "past operational problem or solution regarding critical infrastructure . . . including repair [and] recovery" described in 6 U.S.C. § 671(3)(B) and (C).

2. Exhibit 5: LUMA-Genera Coordination Meeting Notes

Exhibit 5 consists of the weekly notes issued by LUMA System Operations for nine coordination meetings held between April 2 and May 28, 2026. These are operational records of the System Operator, prepared to coordinate the real time operation of the generation fleet with the transmission system. For every unit in the Genera fleet, including the peaking units, they record its availability, its limitations, the technical cause of each limitation, and its estimated return to service. They also record the fuel inventory status at each plant, the volumes and dates of scheduled fuel deliveries, the arrival and changeover windows of LNG vessels, and the fuel mix constraints imposed by supply conditions; the conditions under which the outage of one unit was coordinated depending on the availability of another unit at a specified capacity; the status of protective and switching equipment at the interface with the transmission system; the schedules for testing system restoration capabilities and for environmental testing; and the names and roles of operating and supervisory personnel.

Considered individually, some of these entries may appear routine. Considered together, as they appear in Exhibit 5, they provide a week by week map of the electric system's points of greatest weakness: which units were unavailable and for how long, which units the system depended on at any given time, when fuel supply to each plant was most constrained, where protective equipment was operating with reduced redundancy, and when system restoration

resources were being tested. That is precisely the type of operational and vulnerability information that "could be useful to a person in planning an attack on critical infrastructure." 18 C.F.R. § 388.113(c)(2)(ii). The information also identifies supervisory personnel by name and function, which increases the risk of social engineering against the operators of critical infrastructure, a concern recognized by Act 40-2024 and by Article 1.10(i)(ix) of Act 17-2019.

The fact that the meetings took place several months ago does not diminish the sensitivity of the information. Many of the conditions recorded in Exhibit 5 are long term limitations of specific units, several of which carried no estimated return date, and the recurring patterns of fuel delivery, outage coordination, and unit dependency that the notes reveal remain representative of how the system operates.

3. Exhibit 6: Maintenance Program and Condition Monitoring Records

Exhibit 6 contains, for each plant, the Fiscal Year 2026 records of the preventive maintenance work orders scheduled, with their due date, status, and completion date; the corrective work orders generated, with their entry date, description, status, and closing date; and the condition assessment reports for vibration analysis, infrared thermography, and lubricating oil analysis, which identify the severity of each finding and, where recorded, the associated work request or work order. Given its volume, approximately 3.5 gigabytes of data, Exhibit 6 was submitted as an electronic folder rather than as a paginated document. It is organized into the work order exports generated by Genera's computerized maintenance management system for each facility; monthly preventive maintenance reports; corrective maintenance reports for each plant, in both PDF and spreadsheet formats; and subfolders for each plant containing its condition assessment reports. In the aggregate, the exhibit comprises thousands of individual work order entries.

The records are not limited to routine housekeeping. They identify, by equipment and by unit, the inspection, testing, and repair of fire suppression systems, emergency generators and batteries dedicated to system restoration, station DC power systems and battery chargers, protective relays, main power and auxiliary transformers, turbine control and instrumentation components, and fuel storage tanks and fuel handling facilities. For each entry, they record its priority and its status, so that a reader can determine which deficiencies in those systems remained open, and for how long.

Condition monitoring reports exist to identify, equipment by equipment, which components are degrading and how severely. A compilation of those findings across the entire fleet, organized by plant and ranked by severity, is an "assessment . . . of the vulnerability of critical infrastructure" in the most literal sense of 6 U.S.C. § 671(3)(B). The corrective work order records, in turn, identify deficiencies that had not been remedied as of the date of the records, and the equipment identifiers used throughout the records reflect the configuration of each plant's systems. A person seeking to damage a generating facility would find in Exhibit 6 an inventory of the equipment most susceptible to failure, of the condition of the safety and protection systems designed to contain a failure, and of the deficiencies still awaiting correction. Many of the condition assessment reports rate individual components by severity, including components rated critical, and identify the equipment by its plant tag. The infrared thermography reports, in particular, map the electrical distribution system of each plant, equipment by equipment, and record the condition found at each point. This is specific engineering and vulnerability information under 18 C.F.R. § 388.113(c)(2).

B. Portions of the Exhibits Contain Proprietary and Commercially Sensitive Information of Third Parties

Pages 113 through 117 of Exhibit 4 contain an engineering summary and event analysis prepared by the original equipment manufacturer (OEM) of the Mayagüez gas generators and delivered to Genera, as its customer, through the manufacturer's service channels. The document reflects the manufacturer's diagnostic methodology, its analysis of transient operating data, its inspection and calibration results, the acceptance criteria it applies, and its internal equipment and service case identifiers. This information has independent economic value to the OEMbecause it embodies its technical know how in servicing its own equipment, it is not publicly available, and it was shared with Genera for the limited purpose of supporting the return to service of the affected unit. It therefore satisfies both elements of Act 80-2011 under the broad definition adopted in *Ponce Adv. Med.*, 197 DPR at 906. Genera is not the owner of this information, and Article 1.10(i)(vii) of Act 17-2019 expressly exempts trade secrets of third parties from the information that electric power service companies must disclose.

Exhibit 5, in turn, is a record prepared by LUMA as System Operator, and it contains the fuel delivery volumes, schedules, vessel logistics, and supply constraints of the third parties that supply fuel to the Legacy Generation Assets. The disclosure of those suppliers' logistics and delivery patterns could harm their competitive position and PREPA's position in future fuel procurement processes, which brings this information within Article 4 of Act 122-2019 and Article 1.10(i)(vii) of Act 17-2019. The oil analysis reports in Exhibit 6 stand on the same footing. They are monthly audits and batch summary reports prepared by an outside laboratory, bear that laboratory's copyright notice, and apply its proprietary classification scheme, including its component condition categories, result codes, performance goals, and rating methodology. These reports have independent economic value to their author, who offers them as a paid service; they

are not publicly. Genera does not own the underlying methodology, and disclosure of the reports would expose it to the laboratory's competitors. They therefore qualify as trade secrets of a third party under Act 80-2011 and Article 1.10(i)(vii) of Act 17-2019.

C. The Exhibits Constitute Confidential Information under the LGA OMA

Exhibits 4, 5, and 6 consist of nonpublic technical information about the Legacy Generation Assets developed or obtained by Genera in the performance of the O&M Services, including the results of equipment testing, technical analyses, design and configuration information, and information concerning vendors and contractors, all of which are expressly listed as examples of Confidential Information in Section 1.1 of the LGA OMA. This information is "otherwise confidential" for the reasons set forth above, and it has not been made known to the general public. Accordingly, it falls within the contractual definition of Confidential Information and is subject to the confidentiality obligations of Section 13.2 of the LGA OMA.

D. The Requested Protection Is the Means That Least Affects the Public Interest and Transparency

Section 6.15(a) of Act 57-2014 requires that confidential protection be granted in the manner that least affects the public interest, transparency, and the rights of the parties. The requested protection meets that standard. The Energy Bureau will retain full and unrestricted access to Exhibits 4, 5, and 6 for the exercise of its oversight functions, and the parties may access them under the conditions set forth in Section D(2) of the Policy on Confidential Information.

At the same time, the public retains access to the substance of Genera's compliance. The October 8 Motion and the Supplemental Q4 Report, both public, describe each requirement of the September 18 Order and the content of each exhibit. Exhibit 3, also public, identifies for each forced outage event in the fourth quarter the unit, the cause, the dates and times the unit went out

of and returned to service, the duration, and the corrective action taken.[4] Exhibits 1 and 2, also public, contain the unit, plant, and fleet performance indicators. What remains under seal is the detailed engineering, operational, and condition information underlying those public disclosures.

Consistent with Section A of the Policy on Confidential Information, Genera is filing, simultaneously with this Memorandum of Law, a redacted public version of each of Exhibits 4, 5, and 6, together with the unredacted versions under seal, and is notifying the public versions to all parties. In the public version of Exhibit 4, each root cause analysis retains its identification (plant, unit, date, and event title), its impact assessment, consisting of downtime, generation loss, and safety and environmental effects, etc. The narrative descriptions, analyses, data, photographs, equipment tags, work order numbers, and the names of individuals are redacted. In the public version of Exhibit 5, the meeting dates, section headings, and standard closing language remain visible, and the unit, fuel, and outage entries and the names of individuals are redacted. In the public version of Exhibit 6, the report identification remains visible, including the plant, report type, and period, and the dates and status of the preventive maintenance work orders while the equipment descriptions, condition findings, and analyst names are redacted. Where the records are native spreadsheets, the public version is produced with the confidential columns deleted and in pdf format, to facilitate the disclosure. The redactions are limited to the information that Sections IV.A through IV.C identify as protected.

V. CONCLUSION

Exhibits 4, 5, and 6 consist of detailed engineering, operational, and vulnerability information about the Legacy Generation Assets and their coordination with the electric system,

[4]The public record therefore already discloses, for each forced outage event, the information the Energy Bureau requires to evaluate Genera's compliance with Item 5 of Section I of Attachment A to the February 26th Resolution. Exhibit 4 supplies the underlying engineering analysis.

together with proprietary and commercially sensitive information of third parties, all of which falls within the categories of confidential information recognized by Act 57-2014, Act 17-2019, Act 80-2011, Act 122-2019, Act 40-2024, Regulation 8543, federal law, and the LGA OMA. Their public disclosure would provide a roadmap of the failure modes, dependencies, and pending deficiencies of the generation fleet, without adding to the information the public already has to evaluate Genera's compliance with the September 18 Order.

WHEREFORE, Genera respectfully requests that the Energy Bureau **take notice** of the above Memorandum of Law; **grant** confidential treatment to Exhibits 4, 5, and 6 of the October 8 Motion as Validated Confidential Information pursuant to Section 6.15 of Act 57-2014 and the Policy on Management of Confidential Information, CEPR-MI-2016-0009, as amended, with said exhibits designated as Critical Energy Infrastructure Information subject to Section D(2) of said Policy, and with pages 113 through 117 of Exhibit 4 and the oil analysis reports in Exhibit 6 further designated as trade secrets of a third party subject to Section D(1) of said Policy; **maintain** Exhibits 4, 5, and 6 under seal.

RESPECTFULLY SUBMITTED.

In San Juan, Puerto Rico, this 19th day of October 2026.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information
Plant Name: Aguirre Combined Cycle Plant
Unit/System: CC 1-1 (Gas Turbine 1-1)
Code: 5109
Date of Incident: June 1, 2026
Reported by: Operations Department
Analysis Date: *June 8, 2026*
RCA Team Members: *Ing. Juan C. León, Ing. Joaquin Negrón*

2. Incident Summary
Date and Time of the Incident: June 1, 2026
Location: Aguirre Combined Cycle Unit 1-1
Event: Gas Turbine Trip – Exhaust Gas Temperature Spread

[redacted]

[redacted]

3. Impact Assessment
Downtime: 2.1 hours
Generation Loss: 105 MWh
Safety Consequences: No injuries reported.
Environmental Impact: None.

[redacted]

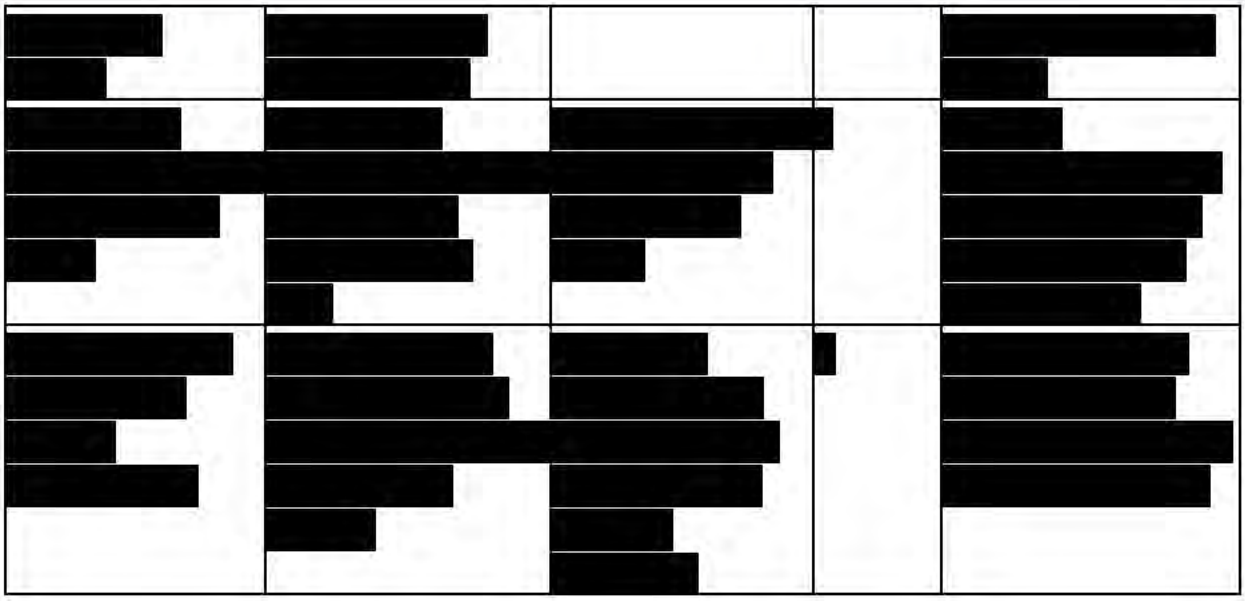

[redacted]

8. Corrective Actions

No.	Corrective Action	Responsible	Status
1	[redacted]	[redacted]	

9. Recommendations

Operations

- Verify exhaust thermocouple temperature profiles during every startup before synchronization.
- Investigate any abnormal temperature spread immediately before increasing unit load.
- Include exhaust thermocouple validation in startup checklists after instrumentation work.

Instrumentation & Controls (I&C)

- Require mandatory point-to-point verification whenever thermocouple wiring is disconnected.
- Implement independent peer verification (two-person check) for all critical protection instrumentation.
- Improve thermocouple cable identification using permanent labels at both field and cabinet terminations.

- Perform loop checks after any maintenance involving exhaust temperature instrumentation.

Engineering

- Review whether additional control system diagnostics can identify crossed thermocouple signals before reaching protection limits.
- Evaluate adding maintenance hold points requiring engineering approval before returning the turbine to service following work on critical protection instrumentation.
- Develop a standard post-maintenance validation procedure for all gas turbine protection sensors.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information

Plant Name: Aguirre Combined Cycle Plant
Unit/System: GT 1-1 – Exhaust Blower System (Bearing No. 3)
Code: 4620
Date of Incident: May 30, 2026
Reported by: Operations Department
Analysis Date: May 2026
RCA Team Members: *Ing. Juan C. León, Ing. Joaquin Negrón*

2. Incident Summary

Date and Time of the Incident: May 30, 2026

9. Recommendations

Operations

- Monitor exhaust blower operating parameters during startup and normal operation.
- Investigate abnormal blower indications before protective limits are reached.
- Continue trending blower performance to identify early signs of degradation.

Mechanical Maintenance

- Perform periodic inspection of exhaust blower motors and bearings.
- Verify vibration and temperature readings during preventive maintenance.
- Replace components showing signs of deterioration during planned outages.

Reliability Engineering

- [redacted]
- Evaluate predictive maintenance techniques, including vibration analysis and motor condition monitoring, to reduce future forced outages.

9. Recommendations

Operations

- Monitor generator electrical parameters for indications of insulation deterioration, including abnormal voltage imbalance or protection alarms.
- Immediately investigate any abnormal generator voltage indications prior to continued operation.

Electrical Maintenance

- [redacted]
- Include detailed visual inspections of bus insulation during planned outages.
- Verify torque and condition of all output bar electrical connections after major maintenance.
- Trend insulation test results to identify progressive degradation before failure occurs.

Engineering

- Evaluate the condition and remaining service life of the generator output bus insulation system.
- Consider implementing predictive maintenance techniques, such as partial discharge monitoring or infrared thermography, for early detection of insulation deterioration.
- Review historical maintenance records to determine whether similar insulation degradation has occurred on other combined cycle units and incorporate lessons learned into the preventive maintenance program.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information

Plant Name: Aguirre Combined Cycle Plant
Unit/System: CC 2-1 (Gas Turbine 2-1 / Generator)
Code: 4601

[redacted]			

9. Recommendations

Operations

- Verify relay targets and sequence-of-events records immediately following any generator differential trip.
- Maintain the unit isolated until the fault location has been positively identified and corrected.

Electrical Maintenance

- Perform complete diagnostic testing of the generator, isolated phase bus, and Main Power Transformer following any differential protection operation.
- Inspect generator terminals, bus duct connections, and transformer bushings for signs of insulation failure, contamination, or overheating.
- Verify current transformer (CT) circuits associated with the differential protection scheme to rule out measurement errors.
- Review generator and transformer test results against historical baseline values.

Protection & Control Engineering

- [redacted].
- Verify relay settings and CT polarity as part of the post-event investigation.
- Develop a standardized post-trip investigation procedure for generator-transformer differential protection operations to improve fault identification and reduce outage duration.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information

Plant Name: Aguirre Combined Cycle Plant
Unit/System: Main Transformer / Battery Bank 2-1 / UPS / 4.16 kV Switchgear
Code: 3620

9. Recommendations

Operations

- Verify system conditions before removing Battery Banks from service.
- Monitor breaker status throughout battery switching activities.
- Record relay targets and sequence-of-events immediately following abnormal breaker operations.

Electrical Maintenance

- Perform periodic inspection and testing of UPS systems and associated fuse protection.
- Inspect trip coils of critical breakers as part of preventive maintenance.
- Verify Battery Bank transfer procedures and DC distribution integrity before scheduled maintenance.
- Perform functional testing of DC control power circuits after battery maintenance.

Protection & Control Engineering

- [redacted]
- Verify that DC control system redundancy performs as designed during Battery Bank transfers.
- Evaluate whether modifications to the battery switching procedure or UPS configuration could reduce the likelihood of similar events in the future.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information

Plant Name: Aguirre Combined Cycle Plant
Unit/System: CC 2-1
Code: 5109
Period of Incidents: April 1–8, 2026
Reported by: Operations Department
Analysis Date: April 2026
RCA Team Members: Ing. Juan C. León, Ing. Joaquin Negrón

2. Incident Summary

Event: Gas Turbine Trip – Fuel Control System

During April 2026, Aguirre CC 2-1 experienced **four forced outage events associated with the fuel control system**. The events occurred consecutively between April 1 and April 8 and required troubleshooting and replacement of several components associated with the natural gas fuel control and inlet guide vane control circuits.

The sequence of events indicates a recurring control-system problem involving the **fuel bypass valve control circuit**, including the TCQC board, LVDT feedback/control, solenoid, solenoid block, and associated wiring. The final event also identified an **RVDT #1 signal associated with the inlet guide vanes** as affecting the circuit.

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

3. Impact Assessment

Number of Forced Outage Events: 4

Total Reported Downtime: Approximately **60.3 hours**

Event	Date	Reported Duration
1	April 1–2, 2026	22.40 h
2	April 6–7, 2026	17.30 h
3	April 7–8, 2026	18.70 h
4	April 8, 2026	1.90 h
Total		**60.30 h**

Generation Loss: Not provided in the available event information.

Safety Consequences: No injuries reported.

Environmental Impact: No environmental impact identified.

9. Recommendations

Operations

- Verify system readiness before removing Battery Banks from service.
- Closely monitor breaker status during battery switching operations.
- Record relay targets and Sequence of Events immediately following any unexpected breaker operation.

Electrical Maintenance

- Perform periodic preventive maintenance and testing of UPS systems and DC control circuits.
- Inspect and test breaker trip coils during scheduled maintenance outages.
- Verify battery transfer procedures maintain uninterrupted DC control power.
- Replace aging UPS protection components as part of preventive maintenance.

Protection & Control Engineering

- Review event logs and oscillography associated with breakers [redacted]
- Verify the integrity and redundancy of the DC control power system during Battery Bank transfers.
- Evaluate whether improvements to the battery switching procedure or UPS configuration are necessary to reduce the likelihood of similar events.

9. Recommendations

Operations

- Following any major electrical fault on adjacent generating units, verify the condition of interconnected units before returning them to service.
- Review relay sequence-of-events records immediately after generator lockouts to confirm the initiating event.

Electrical Maintenance

- Inspect Unit 2-2 generator terminals, bus connections, and protection circuits after external electrical faults.
- Perform insulation resistance and dielectric testing whenever generator lockout occurs due to external system disturbances.
- Verify Generator PT operation after abnormal reactive power indications.

Protection & Control Engineering

- Review relay oscillography and sequence-of-events records to confirm the propagation of the electrical disturbance from Unit 2-1 to Unit 2-2.
- Evaluate whether existing protection coordination and isolation schemes can further minimize collateral trips during major electrical faults on adjacent units.
- Incorporate the lessons learned from this event into future protection system reviews and disturbance response procedures.

9. Recommendations

Operations

- [redacted]
- Review synchronization procedures for generating units connected to a common transformer.

Electrical Maintenance

- Perform comprehensive testing of generator breakers following any protection operation to confirm automatic trip capability.
- [redacted]
- Verify generator and transformer grounding systems after major electrical disturbances.

Protection & Control Engineering

- [redacted]
- Evaluate protection coordination for units sharing the same Main Power Transformer to minimize unnecessary trips during restoration activities.
- Assess whether additional synchronization permissives or interlocks should be implemented when one unit is being restored following a major generator or exciter fault.

9. Recommendations

Operations

- Verify electrical isolation before re-energizing the transmission system following bus faults.
- Record relay targets and Sequence of Events (SOE) immediately after fault events.

Electrical Maintenance

- Perform a detailed inspection of the Unit 2-1 output bus, including bus connections, insulation, and support hardware.

- Conduct insulation resistance and visual inspections before returning the affected equipment to service.
- Review historical maintenance records for similar output bus events.

Protection & Control Engineering

- Analyze relay event records and oscillography to determine the fault characteristics and sequence of operation.
- Verify the correct operation of the protection scheme associated with the Unit 2-1 output bus.
- Evaluate whether additional monitoring or diagnostic methods should be implemented to improve early fault detection.

9. Recommendations

Operations

- Verify system stability before returning units to service following transmission system disturbances.
- Record relay targets and Sequence of Events immediately after major electrical events.

Electrical Maintenance

- Perform a comprehensive inspection of the Unit 2-1 exciter area and associated electrical equipment.
- Inspect nearby buswork, protection circuits, and insulation for evidence of damage resulting from the explosion.
- Verify equipment condition before restoring the affected unit to service.

Protection & Control Engineering

- Analyze oscillography and relay event records to reconstruct the sequence of events leading to the loss of the 230 kV system.
- Verify the correct operation of protection systems associated with the Unit 2-1 exciter and the 230 kV network.
- Review system protection coordination to ensure appropriate isolation of external faults while minimizing impacts on unaffected generating units.

Root Cause Analysis (RCA)

Aguirre Combined Cycle Plant

1. General Information

Plant Name: Aguirre Combined Cycle Plant
Unit/System: GT 2-4 – Inlet Guide Vane (IGV) Control System
Code: 5001
Date of Incident: May 19, 2026
Reported by: Operations Department
Analysis Date: May 2026
RCA Team Members: *Ing. Juan C. León, Ing. Joaquin Negrón*

2. Incident Summary

Date and Time of the Incident: May 19, 2026 – 17:25
Location: Aguirre Combined Cycle Plant – GT 2-4
Event: Unit Trip During Synchronization Due to Inlet Guide Vane Control Trouble Trip

9. Recommendations

Operations

- Closely monitor IGV position and control indications during startup and synchronization.
- Investigate any abnormal IGV alarms before attempting synchronization.

Instrumentation & Electrical Maintenance

- Verify calibration and functionality of IGV position transmitters and associated control signals.
- Inspect wiring, control modules, and communication paths associated with the IGV control system.
- Review the need for forcing the **L4IGVT** signal and identify the underlying cause to eliminate recurrence.

Reliability Engineering

- Review historical records of **Inlet Guide Vane Control Trouble** events for GT 2-4.
- Trend IGV control performance during startup sequences.
- Develop a permanent corrective action if repeated L4IGVT forcing becomes necessary.

9. Recommendations

Operations

- Monitor exhaust gas temperature trends during startup and load changes.
- Review turbine response following CS trips and other load transients.
- Coordinate closely with the **Transmission Operations Center (TOC)** before synchronization following protective trips.

Instrumentation & Electrical Maintenance

- Verify calibration and operation of exhaust temperature instrumentation.

- Inspect the Ex 2100 protection inputs and associated control circuits during scheduled maintenance.

Reliability Engineering

- Review historical Ex 2100 trip events to identify recurring operating conditions.
- Trend turbine exhaust temperature performance during load increases.
- Evaluate startup and loading procedures following CS-5 trips to reduce the likelihood of future protective trips.

Root Cause GAG Unit 2 Vacuum Pump 2-2

ROOT CAUSE ANALYSIS: COSTA SUR UNIT 5 TURBINE TRIP VIA MARK VI CABINET (MAY 25, 2026)

1. General Information

- **Plant Name:** Costa Sur Power Plant
- **Unit/System:** Unit 5 / Steam Turbine Controls & Protection System (GE Mark VI)
- **Date of Incident:** May 25, 2026
- **Outage Type / Code:** Forced Outage (FO) / Code 4312
- **Analysis Date:** June 6, 2026
- **Reported by:** Ing. Juan C. Leon

[redacted]

3. Impact Assessment

- **Generation Loss:** ~410 MW (Total Unit 5 capacity lost to the grid).
- **Downtime:** 63.13 Hours (from May 25, 2026, to May 28, 2026) [4].
- **Safety/Environmental:** None. The turbine auxiliary systems operated correctly to bring the rotor to a safe stop on turning gear. No safety or environmental incidents occurred.

ROOT CAUSE ANALYSIS (RCA): MECHANICAL BINDING OF UNIT 6 TURBINE INLET VALVES (APRIL 20, 2026)

1. General Information

- **Plant Name:** Costa Sur Power Plant
- **Unit/System:** Unit 6 / Steam Turbine Valve System
- **Date of Incident:** April 20, 2026, 14:00
- **Outage Type / Event Code:** Forced Outage (FO) / Event Code 4260
- **Analysis Date:** August 7, 2026
- **Reported by:** Ing. Juan C. León

[redacted]

3. Operational Impact Assessment

- **Generation Loss:** Approximately 365 MW of baseload capacity lost to the grid [8].
- **Downtime:**
  276 hours and 26 minutes of total downtime calculated from the first failed synchronization attempt until the safe return of the unit on May 1, 2026 [7, 8].
  The net forced outage registered in Genera PR's outage logs recorded 247.3 hours under Event Code 4260 between April 20 and April 30, 2026 [12].

- **Safety/Environmental Impact:** None. No personnel injuries or steam releases occurred during the transient [8].

[redacted]

6. Follow-up Plan (Corrective Actions)

To prevent recurrence of control air starvation on critical plant valves due to housing failures, the following preventive actions have been established:

- **Review Preventive Maintenance (PM) Filter Inspections:** Audit and update the existing preventive maintenance (PM) checklists to mandate the visual inspection of instrument air filters, water separators, and regulators across all critical loops to verify physical integrity and degradation. **Completed**
- **Replacement of Plastic Filter Housings in High-Criticality Loops:** Conduct a physical plant-wide walkdown to identify any old or active plastic air filter covers/housings installed on sensitive, high-criticality control valves (such as fuel supply and feedwater regulation). Program the immediate replacement of any identified plastic units with robust metallic or reinforced housings. **Completed**

[redacted]

Root Cause Analysis Unit 3 Trip Caused by Forced Draft Fan Airflow Signal Failure

Section 1: Event Identification and Logging

- Event Title: UNIT 3 TRIPPED ON JUNE 24, 2026
- Date and Time of Event: JUNE 24, 2026
- Location: Central Palo Seco
- System/Equipment Involved: Unit 3 Forced Draft Fan Airflow Instrumentation and Control Logic
- Event Description (Summary):
    1. Unit 3 was operating steadily at approximately 100 MW when an abnormal condition developed in the Forced Draft Fan airflow indication circuits.
    2. At 10:22 a.m., the East airflow indication for Forced Draft Fan 3-1 dropped to zero.
    3. Instrumentation and Controls personnel responded to investigate and correct the loss of indication.
    4. During the inspection, significant corrosion was identified at the instrumentation terminal block where the airflow signal wiring was connected.

5. While troubleshooting the affected terminal connections, the airflow indication for Forced Draft Fan 3-2 was also lost at approximately 11:33 a.m. and dropped to zero.
6. With both airflow indications unavailable, the control logic maintained the last valid airflow average, allowing the unit to remain temporarily stable.
7. At approximately 11:37 a.m., when the airflow wiring was reconnected, the control system detected the returning signals and stopped using the retained last-valid airflow average.
8. The control system then began recalculating the airflow average using indications that had not yet fully stabilized.
9. The calculated airflow average entered the protection trip range before the signals could stabilize, resulting in the trip of Unit 3.
10. As an immediate corrective action, the corroded terminal block was temporarily bypassed, and the airflow signals for Forced Draft Fans 3-1 and 3-2 were directly connected.
11. Work Request 68914 was generated for the permanent correction of the affected terminal block and associated wiring.

ROOT CAUSE ANALYSIS UNIT 5 TRIPPED DUE TO WATER INTRUSSION INTO FIRE PROTECTION SYSTEM

Section 1: Event identification and logging

- Event Tittle: Unit 5 tripped due to accidental activation of the fire protection system
- Date and Time of event: March 26, 2026, 12:13 PM
- Location: Central San Juan
- System/Equipment Involved: Fire protection system

1. Unit 5 was in service in combined cycle mode, generating approximately 125 MW as follows:
    - Combustion Turbine (CT): 90 MW
    - Steam Turbine Generator (STG): 35 MW

2. At 12:13 p.m., the fire protection system was activated, causing the unit to trip out of service.
3. Due to heavy rainfall in the area, the Instrumentation Department found water infiltration in one of the fire system pull stations (z009, mechanical package), which triggered its activation.
4. Additionally, five minutes prior to the event, a Generator Field Ground alarm was recorded, and water was found in the area of the excitation system.
5. The Instrumentation Department cleaned and sealed the pull stations with tape.

6. During insulation resistance (megger) testing of the rotor and stator, low values were detected in the rotor. The Electrical Department proceeded to apply external heat.
7. After several hours of drying with external heat, the Electrical Department authorized the unit's return to service.
8. The combustion turbine returned to service at 6:24 p.m. The steam turbine returned to service at 9:35 p.m.

Reported by: Radames Alvarado, Director of Operations North

ROOT CAUSE ANALYSIS FOR UNIT 5 BLADEPATH SPREAD TRIP

Section 1: Event identification and logging

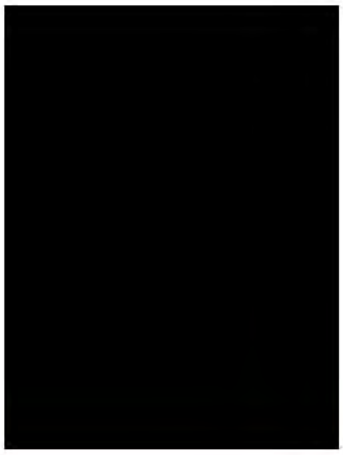

- Event Tittle: UNIT 5 BLADEPATH SPREAD TRIP
- Date and Time of event: March 21, 2025, 12:13 PM
- Location: Central San Juan
- System/Equipment Involved: CT5 BLADEPATH

1. On April 21, 2026, Unit 5 was in the process of increasing load following the synchronization of the steam turbine, after an initial shutdown earlier that morning due to the activation of the fire protection system.
2. The Steam Injection (SI) desuperheater was being operated in manual mode, modulating the isolation valve (5-BF-AOV-2388) due to a Temperature Control Valve's leak (5-BF-TCV-2388), which was affecting operational parameters, including ammonia injection.
3. During the unit's early morning trip, the shutdown was performed according to the corresponding TOI (2026-SJ-05-BOP SPRAY-02) procedure.
4. Upon returning the unit to service, the operator detected high temperatures when beginning the load increase in the combustion unit. The field operator was instructed to modulate the isolating valve; however, the operator did not notice that the SI control valve was 95% open.

5. Although the coordination to open the valve was gradual and in direct communication, once the temperature began to decrease, the closing of the isolation valve was ordered. Approximately 20 seconds later, the temperature dropped drastically, causing the unit to trip due to the Blade Path Temperature Spread differential.
6. The unit tripped at 3:30 p.m. at 147 MW.
7. During the post-trip inspection, it was discovered that the SI line had a steam leak, which was corrected by ICM personnel.
8. The unit returned to service at 4:21 p.m. with the desuperheater operating with the manual isolation valve modulated

ROOT CAUSE ANALYSIS FOR LOSS OF NSST CAUSED BY BFP 9-2 FAILURE

Section 1: Event identification and logging

- Event Tittle: LOSS OF NORMAL BUS CAUSED BY BFP 9-2 FAILURE
- Date and Time of event: May 23, 2026, 15:23
- Location: Central San Juan
- System/Equipment Involved: BFP 9-2
- Event Description (Summary):

1. Unit 9 was in service, generating approximately 70 MW.
2. At 15:23, Supervisor Jorge Gonzalez informed to the Control Room of several arch flash near the boiler feed pumps.
3. Control Room observed erratic readings on all equipments meters.
4. During the preliminary inspection, the BFP 9-2 motor was found wit flash marks near the connection box.
5. The Electrical department confirmed that BFP 9-2 failed the megger test.
6. During a subsequent startup attempt, the unit trip after trying to close the "field breaker", event was refered to electrical section to conduct tests.

MONTHLY SUMMARY FOR JANUARY 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR MAY 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR APRIL 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR MARCH 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR APRIL 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR AUGUST 2025

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR MARCH 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR FEBRUARY 2026

COMPONENTS REQUIRING SPECIAL ATTENTION

		COMPONENTS				
CHRONIC	1	4				
NEGLECTED	5	1	2	9	93	212
DEADLINED	0					
STANDBY	0					
SCHED. SHUTDOWN	1	94				
OTHER UNSAMPLED	0					

Chronic Components are those with three or more consecutive critical reports and require maintenance follow-up.

Neglected components have not been sampled for three or more sampling periods.

Deadlined, Standby, and Scheduled Shutdown components should be reported to the laboratory as such or they will be classified as Unsampled or Neglected.

MONTHLY SUMMARY FOR JULY 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR DECEMBER 2025

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR NOVEMBER 2025

COMPONENTS REQUIRING SPECIAL ATTENTION

		COMPONENTS				
CHRONIC	0					
NEGLECTED	0					
DEADLINED	0					
STANDBY	0					
SCHED. SHUTDOWN	5	3	4	86	227	242
OTHER UNSAMPLED	0					

Chronic Components are those with three or more consecutive critical reports and require maintenance follow-up.

Neglected components have not been sampled for three or more sampling periods.

Deadlined, Standby, and Scheduled Shutdown components should be reported to the laboratory as such or they will be classified as Unsampled or Neglected.

MONTHLY SUMMARY FOR APRIL 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR DECEMBER 2025

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR MARCH 2026

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS

MONTHLY SUMMARY FOR SEPTEMBER 2025

INTRODUCTION

This monthly audit summarizes the results of the Mechanical Systems Integrity Management program. Data is presented in graphic form for the month, year-to-date and prior year. Reports provide a graphic trend against which to measure effectiveness of maintenance operations in terms of mechanical condition of equipment as well as supervisory control of the department.\n\n The audit is divided as follows:

a) CURRENT RATING

b) MECHANICAL CONDITION

    1) AVAILABILITY

    2) CRITICAL COMPONENTS

    3) PRECAUTIONARY COMPONENTS

c) SUPERVISORY CONTROL

    1) SAMPLING COVERAGE

    2) NEGLECTED COMPONENTS

    3) CHRONIC COMPONENTS
